**MEDALLOCATORS, INC. ACHIEVES
97% SUCCESS RATE IN ACCEPTANCE OF CLAIMS FOR
SECTION 111 COMPLIANCE**

Duluth, Georgia – **MEDALLOCATORS, INC.** the nation’s largest privately owned MSP Compliance Company focused on Workers’ Compensation and Liability claims markets, has reported that after an average monthly query and reporting of over 250,000 claims, has produced a 97% acceptance rate for Section 111 claims submitted via its **MEDALLOCATORS REPORTER** comprehensive web based reporting solution.

The Section 111 reporting process went live on January 1, 2011 for all workers compensation claims and certain liability/no-fault claims as defined by the Centers for Medicare & Medicaid Services (CMS). MedAllocators is currently assisting numerous Responsible Reporting Entities (RRE) who are attempting to take on the responsibility of reporting their own claims. The issues that MedAllocators has heard from these RREs have centered on a lack of data validation and an understanding of how to correct errors that were returned with the Claim Response File. If RREs continually report data with errors, they expose themselves to the risk of non-compliance penalties.

“MedAllocators is dedicated to providing a comprehensive but simple reporting platform that keeps our valued clients compliant with Section 111. What makes us different is how we implement our reporting platform and provide a complete educational component to our clients. The more informed our clients are the less risk they run of any non-compliance penalties.” says Harold Brooks, Executive Vice President, MedAllocators, Inc.

MedAllocators Reporter is an easy to use web based solution that allows RREs, regardless of claim volume, to upload their claims via a Secure File Transfer Protocol. Smaller claim volumes can also simply manually enter required fields for querying a claim to identify Medicare status. MedAllocators Reporter currently provides:

- Simple exchange of all formats
- Safe and secure access with encrypted data transmission following strict COBC guidelines
- Consulting and assistance through setup, registration and submission
- Validation platform to manage and correct data files before submission to COBC
- All reports are configured to COBC guidelines
- Instant validation and notification of all manually entered query and claim files for errors
- Easy online access to correct MSP response to submission errors and occurrences
- Instant ICD 9 code look up drop down tables in each ICD 9 data field
- Generate progress reports to manage, monitor and track all query and claim databases
- Advanced lien search feature for conditional payment status of Medicare eligible claimants
- Disaster recovery protocol with dedicated server clusters and backups

At MedAllocators we understand the importance of complying with Section 111, and the burden it puts on our clients and their RREs in understanding the current requirements and constant updates to these requirements mandated by CMS. It is our mission to ensure that we give them the easiest, most affordable and compliant solution in the industry.
